If it's Klez, the actual source is most probably NOT the address shown in the From: line. Klez harvests both sender and addressee from files (including email) on the infected system.

Hello Ed,
Your going to get a huge variety of replies to this question, here's my .02

For US and Canada, I send direct.
If you really want a card back, send an SASE (Self Addressed Stamped Envelope) with your card. Remember postal rates in Canada are a bit higher than ours, and US stamps won't work from there. :-)

As for DX, send 5 #10 SASE's to the ARRL Incoming Buro (<http://www.arrl.org/qs1/qs1in.html>) and keep a supply with them. When you work in contests (or just play around in them) you'll will almost always get a few. To use the out going ARRL Buro, you must be an ARRL member. Their website (<http://www.arrl.org/qs1/qs1out.html>) has all the information you need.

For sending directly to DX stations, first look them up on Buckmasters web page (<http://www.arrl.org/qs1/qs1out.html>) many have Stateside managers, and you only need send them your card along with a SASE. Others ask for green stamps (US Dollars) or IRC's (info about that here <http://www.ac6v.com/irc.htm>). Be careful sending money thru International mail, in some countries it's against their laws and you both could wind up in trouble.

Remember, when working with any Buro, International mail is slow and it's not uncommon to wait a year or longer to get a card back.

Also check with any clubs or organizations you belong to and see if they have a Buro. FISTS has a real nice one (<http://www.fists.org/buro.html>).

There will be many more tips coming your way, write them all down and review them!

Hello All,

I was wondering if someone could tell me how to send out QSL cards, I have made some of my own, and I figure you just fill in the blanks and drop them in the mail. The only 'DX' contacts I have to date are from Canada, is there anything wrong with just sending international QSL in the mail? What about all these Buro's I hear about? How do they work? are they worth it for a low volume operator such as myself?

Tnx es 73

1st crystal radio... my Dad built it for me when I was in about the 3rd or 4th grade, a few decades ago. Build many myself after that. Infact have an "old looking" oatmeal box type on shelf of shack and the young kids get a kick out of it. And gathering parts to make a bunch for my kids and their kids, (cat whisker types). I want them to look OLD. Have some shiny phenolic boards for front panels.

DOES anyone remember a Boyscout two tube kit, regen, that used two 3v4's, 90 volt B supply. Mounted to a plywood base with fhanstock clips. From the early 50's, back when I didn't save everything.

Oscar Hoyt, ham since '55, K2 # 2264, ARRL, QCWA, QRP-L 1733, ARCI, NORCAL, SOC # 3o3 303

Subject: [134609] Tornado in Utah
Message-ID: <000501c25861\$977e3d20\$d4b4d2d1@ARMSTRONG>
MIME-Version: 1.0
Content-Type: text/plain;
charset="iso-8859-1"
Content-Transfer-Encoding: 7bit

Thanks to those who sent egrams about the tornado in little Manti, Utah. There have been only 18 tornados of any size in all of Utah since 1950 as far as I can tell there has never been one in my town.

Manti is in a valley about 7 miles wide at 6000 feet elevation. There are mountains as high as 11,000 feet on the East and 9,500 feet on the West. The town is about a mile square, population 3,000. It is nestled right up against the east mountains. An unlikely place for a tornado!

The tornado was an F3. It touched down near a hardware store about 300 yards from my home. Six homes were totally destroyed and 61 were damaged. A small park about 200 yards from my home lost six large trees.

I was at the hospital doing emergency room duty. We immediately alerted our back-up nursing staff, but amazingly not one injury was reported. Most of the townsfolk were at church (it was Sunday afternoon) and the tornado missed it entirely.

My property suffered no damage at all. The antennas are all standing and the rigs still work.

Again, thanks to those who inquired and expressed concern.

Bob, N7XJ
Manti, Utah

Back in the late 70s I had an old (even for then!) Lafayette HA-650. It was solid state, put out a few watts using the internal C-cell pack and had a full-size 6M whip and carry strap for pedestrian mobile. Kind of a fun radio, but there was very little 6M AM activity in NJ back then, esp. at the depths of the solar cycle. I added a regenerative control so I could receive CW and SSB on it and made a few chirpy CW qso's by keying the mike. It was an interesting and well made qrp rig for it's era, and my first-ever qrp radio. No wonder it makes me so nostalgic!

Steve gave you an excellent reference (the FIST manual). Another good one is DOE handbook 1084 (file size approx. 610KB):
<http://tis.eh.doe.gov/techstds/standard/hdbk1084/hdbk1084.pdf> . Table 1 on page 19 discusses S.G. for different types of batteries.

The spread in your numbers is not out of line for a used battery. What's more important is how it's changed over time. If the original S.G. was around 1.22, your readings are normal. But if it's supposed to be 1.25 or more, then the battery either isn't fully charged, or may be nearing the end of its useful life.

Boxes & covers are just about done, machined & deburred, are going to
anodizer tomorrow, should be back by the end of the week & shipped. (first
55 boxes) I'll start a new run immediately.

I'll get the list of off-board parts together & post it so's everybody can
get what they need to fit the box.

Hi All;

I still have a few more sets of 12 Gates, Nicad Sub-c cells. 1.3vdc@1300mah ea.

These are brand new, I had a box of over 400 once :-)

Anyway, they make a nice portable dc supply by string them together in a pack. Just solder wires on the ends!

Price is \$15.00ppd for 12.

Hi Ken,

The pot is for the RF gain option. If you choose not to use the RFG, the
key jack can be installed in that hole & the rear panel key jack hole
plugged.

I've just had a quote for the PCBs. They will be more expensive than I'd hoped, mainly because my supplier wants to use a photoplot instead of the cheaper film artwork, and I'm only getting 20 of each made. To keep the cost down they won't have solder mask or silk screen.

I can supply them at \$8 each, including air mail postage. Payment via PayPal. I think I opened an account a long time ago, but have never used it.

Please email me if you are interested. I won't go ahead unless I get sufficient orders.

Or how about the Conelrad Radio I saw (and built at about 10 years old)
from a Boy's Life reprint on ham radio making the rounds about
1960ish?? It was basically a glorified crystal set with a 1N34 diode
and some sort of slug-tuned (Meissner??) coil and a variable cap as
well, plus a 2-stage "transistor" audio amp with a 2N35 and ????. I
built it on a piece of pine board with masonite sides and front panel,
and, yes, fahnestock clips for antenna, ground, and headphones.

As I recall, the reprint also had a cover article and picture of a Scout
with a tube-type mobile mounted in the wire front basket of his
bicycle! I've never forgotten that - one of these days I'm gonna have
to put a rig on my bicycle!!!

When I was young we lived in West London. I don't remember it but a small air disturbance (not really a tornado) destroyed a couple of houses in Acton. There was a TV programme about it a couple of years ago.

Hi Bruce.

Glad you were happy with your cards. Your ringing endorsement was not necessary but is greatly appreciated.

To answer some of the common questions, please permit me to mention what I am able to create.

All cards are:

- Printed with Black Ink on Minimum 67 lb. Cardstock
- Your Choice of White, Yellow, Green, Blue, Grey or an Assortment of Cardstock Colours
- Several Logos on file, your logo in computer format or I can scan the logo for you.

- Custom design work is available at no extra cost
- Standard QSO Data Box Can be Completely Covered by a 2 5/8" x 1" Computer Label

I will have a website of samples online later this weekend. I'll let you know where to find it once it is online.

If you would like more information or if you would like to receive an email sample or a snail-mail sample, send me an email and I would be happy to send you the information that you require.

Thanks again Bruce.

I've just built a simple crystal parameter checker. It's basically two BNC connectors, two 6 dB 50 ohm pads, a socket for the crystal and a DPDT switch to switch between the crystal and a 100 ohm multi-turn trimmer. With a signal generator on the input port and a scope on the output, I can measure f_s , f_p , the 3 dB points, the attenuation at f_s and the equivalent series resistance fairly easily. An RF voltmeter or sensitive power meter would be better than the scope. The tester may therefore be used for both OH8R0's CaxTal method and W7ZOI's technique (I think) for calculating the parameters. Co has little effect on ladder filter response according to the simulations I've performed (the crystals are series-resonant), and may be neglected. It could be measured with a suitable capacitance tester, of course, and/or calculated from the other readings.

Could someone let me have W7ZOI's formula, from his QST article in May, 1982?

I'll be adding details of this gadget, and a PCB design, to my web site over the next day or two.

I've been with Paypal for over 2 years and haven't had one single problem either buying or selling. The integrated UPS shipping and tracking make the service more than pay for the cost of the transactions...

Just my 2 cents,

Mark

I am currently having a bad bash with PayPal.

Last year I sold a huge load of stuff on Ebay. Then I moved here to Cali and a friend of mine was supposed to ship out the remainder of the stuff. She crewed everything up - stuff went to the wrong people, some stuff never went out.

I sent a (large) check to PayPal to reimburse the people who didn't get their stuff. PayPal cashed my check but never paid the people and still won't reactivate my account.

I was with them a long time. This sting will probably keep me away from PayPal for a while. The concept is great - but remember they're NOT a bank and don't have to comply with a lot of things a regular bank would have to comply with.

I found a bunch of web sites that tell awful horror stories about PayPal. Still, even with these, and my bad experience, they seem to be the best bet for internet money transfer.

Tracy N4LGH

I've been with Paypal for over 2 years and haven't had one single problem

either buying or selling. The integrated UPS shipping and tracking make the service more than pay for the cost of the transactions...

I've had absolutely no trouble with Paypal - much to my bank's chagrin. Paypal has a good reputation with buyers because they are NOT the ones nicked! It is a tradeoff. I'd be a bit more leery of committing funds to a new company after having a lot of success with Paypal. Of course, I was leery when I first tried Paypal...

Gang:

Several have already written with typos needing attention. Thanks to all who have taking time to write. Now, if anyone else sees some errors in my log, please send me a note. I would like to send the corrected log to our scorer and web master ASAP. Thanks. By the way, thanks again to all who dropped by during the hunt. It was truly great fun and it simply could not have happened without all of you.

73,

so...let's say I DO manage to construct my 20M
Rock-Mite. Then what? Anyone have ideas on an
inexpensive, easy-to-construct tuna kit for a complete
beginner? Or have one I might acquire? Or ideas for
getting it on the air without a tuna, or any other
kind of fish? Thanks!

You don' need no steenkin' tuna. All you need is a matched antenna, like a
diaperpole, or a vortical. If you like fish, put up a bream.

<http://www.fix.net/~jparker/norcal/bttfut/bttfut.htm> Information on the
TT-2 ... not for 20 mtrs but some have been scaled to that band. For
information regarding this conversion you might contact jsm@gulfislands.com
<jsm@gulfislands.com> VE7SL, Steve McDonald who was the first to work all
states (WAS) using a stock TT-2 on 40 meters. I believe he scaled one for
twenty and he might help you with values. Shouldn't be too difficult.

Hi Doug,

I have used Paypal for some time without a problem. How do I pay you with C2it? I have never heard of it.

Barry, W2BJ

OK here's why...i heard that paypal is now owned by ebay, and that is not necessarrily a good thing...and I have heard about legal/financial problems with paypal...and if you need to talk to paypal , tough luck - there is no possible way to speak to a breathing person, whereas c2it has 24 hour help - I called 'em last nite at 10 PM and talked with a nice lady who knew exactly

what she was doing and got me squared away..If anybody has concrete info on paypal etc, i'd like to hear it...

I have received a few notes from people that say they like paypal, none against....

Also, they are not mutually exclusive...I can always do both or something else entirely...also I am working with my bank to get set up with a straight-up Visa/MC account...

I have a Knight TR-106 and V-107 vfo fs.
Mike and schematics included.
Tx/Rx aligned and tested on the air recently.
VFO may need work....never used here.
A few rust spots on cabinet.
Contact me off the list if interested....we can work out a price or trade for boat anchor stuff.
